OID PROJECT

"Decentralized Road to Recovery"

Solving a World Epidemic!

ADVANCED BLOCKCHAIN TECHNOLOGY FOCUSED ON LIBERATING VICTIMS OF OPIOID ADDICTION THROUGH CUTTING EDGE TECHNOLOGY KNOWN AS THE NALTREXONE IMPLANT

We begin attacking Opiate Addiction and rebuilding the lives of victims and their families!

<h1 style="text-align:center;color:#2E9FD6">WHAT IS THE OID COIN?</h1>

Every day, more than 115 Americans die after overdosing on opioids. The misuse of and addiction to opioids—including prescription pain relievers, heroin, and synthetic opioids such as fentanyl—is a serious national crisis that affects public health as well as social and economic welfare. The Centers for Disease Control and Prevention estimates that the total "economic burden" of prescription opioid misuse alone in the United States is $78.5 billion a year, including the costs of healthcare, lost productivity, addiction treatment, and criminal justice involvement.

We knew someone had to get involved and help this widespread epidemic, so WE FOUNDED the OID COIN. 50% of our efforts go to our Founding partner SoberLifeUSA as well as the other recovery centers who have signed on to use our coin as payment since the conception of the coin. This coin will be used to treat patients and help build out needed infrastructure and support staff.

Advanced Treatment is HERE ! This is a Reality and **OUR MISSION** is to help solve the number one Epidemic, the Opioid Crisis!

Introduction to OID

The OID Project is focused on empowering users with economic freedom through blockchain technology while supporting a cutting edge medical process to help those addicted to opiates become "SoberLifeUSA" and ultimately eliminate this great scourge of addiction!

The OID Project will release a PoW Scrypt Coin based on Litecoin technology. The coin will be immediately mineable on OidPool.com along with other mining pools to follow soon. The Oid Coin will have a 10% Founders Fee coming from the Mining Proceeds, 50% of our efforts go to our Founding partner SoberLifeUSA as well as the other recovery centers who have signed on to use our coin as payment since the conception of the coin. The other 5% will be used to continue the development of the blockchain. Our Roadmap shows the long-term future development of our blockchain.

50% of our efforts go to our Founding partner SoberLifeUSA as well as the other recovery centers who have signed on to use our coin as payment since the conception of the coin. CryptoFarm7 will arrange transportation for individuals who are approved to enter the SoberLifeUSA Program which is located in Fountain Valley, California. Their link is attached below for reference https://soberlifeusa.com.

The OID Project is focused on empowering users with Freedom through blockchain technology. We want to connect, Doctors with treatment centers and insurance providers all within our blockchain to provide a seamless, secure private transaction of data.

We have several Treatment centers that will accept the OID Coin as form of payment and even give a discount to patients or insurance companies that use the OID Coin as payment.
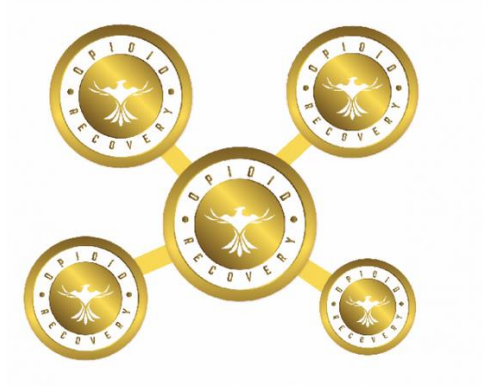

There are many types of freedom OID can offer including freedom to be a blockchain entrepreneur, freedom to be a cryptocurrency investor, freedom to process secure and private transactions, freedom to make a positive impact on the world and spread a life changing product that can affect not only the lives of victims of opiate addiction but also the lives of their family and friends. OID Project allows users the freedom to do the right thing and feel great about the helping others along the way!

COIN SPECIFICATION

Coin Name: Opioid Coin   **Ticker: OID**

- Algorithm: Scrypt PoW
- Block Time: 2 Minutes
- Block Reward: 500 OID
- Reward Halving: Block 210,000
- Total OID Supply: 214,285,714
- Development fund: 5% Charity 5%
- 2% Pre-Mine: 4,285,714 Coins
- Coinbase Maturity: 20 blocks
- Transaction Confirmations: 10

FUTURE BLOCKCHAIN UPDATES

V.2 Release Coming 4th Quarter 2018

- ADD PoS STAKING
- Staking Rewards: 15% for 6 Months
- Staking Rewards: 10% for following 6 Months
- Staking Rewards: 5% for following 6 Months
- Staking Rewards: 3% Thereafter

V.3 Release Coming 1st Quarter 2019

- ADD SUPER BLOCKS
- 300,000th Block: 15,000 OID Bonus
- 400,000th Block: 12,000 OID Bonus
- 500,000th Block: 10,000 OID Bonus
- 600,000th Block: 8,000 OID Bonus
- Every 100,000th Block Thereafter: 5,000 OID Bonus

V.4 Release Coming 3rd Quarter 2019

- IMPLEMENT MASTERNODES
- PoS hashing algorithm: Scrypt
- Difficulty retargeting: Every Block
- Max supply: To be Determined
- Block time: To be Determined
- Block reward: To be Determined

Security

OID Coin offers the security and widespread acceptance of the Litecoin Protocol which is faster than BTC and has lower fees than BTC.

OID Coin has powerful privacy features built into the protocol which provide investors the right and ability to trade and purchase goods and services within their sphere of privacy.

This allows entrepreneurs to release their products and to crowdsource funds from an audience that may always prefer to maintain their privacy. We sincerely hope that other projects which are designed to help others can be built on top of the OID Project.

Operations

OID Coin is run by a team of experts at CrytpoFarm7 in all things Blockchain. The founders of OID Coin have extensive experience building and running large scale mining farms, building and operating master nodes, building and offering mining pools, modifying blockchain code and much more.

The OID team has great experience modifying Blockchain code, programming master nodes, creating mining pool nodes and most everything else involving cryptocurrency whether it's the hardware or the software side.

As a means of continuing its operations and growing the OID Project to its maximum potential, the founders of the OID Project will pre-mine less than 2% of the total amount of OID coins being released. This will great value which the OID Project can then use to keep the project growing and moving forward in order to help pay for development of the blockchain, digital assets, marketing and operations.

Why IS OID Coin based on the Litecoin Blockchain?

Litecoin blockchain operates as a "trustless" transactional system—a framework in which individuals can make peer-to-peer transactions without needing to trust a third party OR one another. [3]

Blockchain definition – What is it?

"A blockchain is a **cryptographically secure transactional singleton machine with shared-state."**

- **"Cryptographically secure"** means that the creation of digital currency is secured by complex mathematical algorithms that are obscenely hard to break. Think of a firewall of sorts. They make it nearly impossible to cheat the system (e.g. create fake transactions, erase transactions, etc.)

- **"Transactional singleton machine"** means that there's a single canonical instance of the machine responsible for all the transactions being created in the system. In other words, there's a single global truth that everyone believes in.

- **"With shared-state"** means that the state stored on this machine is shared and open to everyone." [3]

History of Litecoin Blockchain

Litecoin is one of the most successful Alt-coins in the world today. It was created by Charlie Lee on October 7, 2011. Lee created Litecoin with the idea that "Litecoin … "be the silver to Bitcoin's gold."

"Unlike the other altcoins at the time, Lee saw Litecoin coexisting with Bitcoin as a complement rather than as a competitor. Much in the same way that both gold and silver can concurrently retain value as precious metals with slightly different though overlapping utilities, Bitcoin and Litecoin could coexist." [8]

Lee thought that while Bitcoin provided one service ((gold)) that was perfect for high end, large transactions, Litecoin could provide a similar service (silver) that was better tailored for smaller, less expensive transactions. While doing so, Lee also wanted to make sure that Litecoin would not directly compete with Bitcoin. He focused on 2 major design choices to facilitate this:

      1   Litecoin would have quicker transactions than Bitcoin. Litecoin's block time (the

amount of time needed to validate a transaction) was reduced by 75% to 2.5 minutes from Bitcoin's 10 minutes.

2   Rather than relying on SHA256 cryptographic hash functions like Bitcoin, Litecoin uses Scrypt functions. In theory, this allowed people without dedicated mining hardware to mine Litecoin (though this has since changed with the advent of Litecoin specific miners). [8]

When designing Litecoin Lee's choice of 2.5-minute block times for Litecoin in contrast to Bitcoins choice of 10 minutes block times meant that Litecoin would be mined out 4 times faster than Bitcoin if he did not do anything about this. To counter this Lee made the supply of Litecoin 4 times larger than the supply of Bitcoin which can be seen in the diagram below.

To make up for shorter block times and its coins being mined in 1/4 the time of Bitcoin, Litecoin has 4 times as many coins. [8]

Mining incentives for mining began with the first miner to successfully verify a block being rewarded 50 Litecoins. The number of Litecoins awarded for verifying a block reduces with time and halving will continue at regular intervals until all 84,000,000 Litecoins are mined.

Block times represent the amount of time needed to verify transactions. The longer the block time, the more security is conferred on the transaction and the surer the parties involved in the transaction can be that their exchange was valid. Once the block is created, they can be sure that the transaction will be settled. Most exchanges, such as Coinbase, wait for 6 confirmations (aka 6 blocks) before officially endorsing a transaction. This means that Bitcoin transactions take at least 1 hour to settle. [8]

Lee said ok this makes sense for large purchases like cars or laptops but it is unnecessary for smaller transactions. He believed that for most transactions, a shorter block time would be sufficient and that one confirmation was usually enough time to be reasonably sure of a transaction's validity. It is important to note that block times are made up of

1) the time that it takes miners to verify the transaction &
2) the time it takes for them to propagate their verification to the rest of the network. It takes time for the miner with the winning solution to tell everyone else that, "Hey, I found the right answer. Stop working on this block and start working on the next one." [8] * This creates the infamous Orphan Blocks all miners become aware of at some point in their careers!

Beside changing the supply and block times, Lee also changed the Bitcoin protocol from SHA256 cryptographic hashing to Scrypt cryptographic hashing.   Lee made the change from SHA256 to Scrypt because while Scrypt is intensive and memory hard (requires a significant amount of RAM) it is more easily processed on a CPU. "Scrypt just adjusts the number of random variables that need to be stored compared to SHA-256." [9]

"Scrypt creates a lot of pseudorandom numbers that need to be stored in a RAM location. The algorithm then accesses these numbers a few times before returning a result. Generating the numbers is computationally intensive and as they are accessed a few times it makes sense to use RAM in conjunction with hashing power rather than generating them on the fly – a time and memory trade off in terms of optimizing speed." [9]

Using Scrypt therefore should allow more miners to join the network and it should lower the advantage ASIC Bitcoin miners have in the network. The idea here is that Litecoin miners would not be competing with Bitcoin in terms of mining. Its important to note that Litecoin is also not intended to be competing with Bitcoin in terms of utility. When one understands this it becomes clear that Litecoin is the silver to Bitcoins gold.

Charlie Lee's ideas worked as Litecoin "reached a $1 billion market cap in November 2013. As of January 2018, its market cap is just over $13 billion. On December 20, 2017 Litecoin founder Charlie Lee sold all of his Litecoin holdings to remove any perceived conflicts of interest." [8]

Charlie's idea continues to work today as both a cryptocurrency and a platform. OID Coin chooses to use the Litecoin Protocol.

Reasons OID Coin is based on the Litecoin Blockchain?

1   SPEED AND THROUGHPUT

Litecoin currently generates blocks four times faster than Bitcoin and confirms transaction legitimacy in significantly larger groups than Bitcoin can per period of time.

2   MARKET CAP

Litecoin can create 84 million total coins as opposed to the 21 million coins Bitcoins protocol allows.

3 SCRYPT ALGORITHM

Scrypt Algorithm is memory hard and it lowers the advantage of ASIC miners encouraging more miners to enter and work on the Litecoin network.

4 LOWER FEES

Litecoin was designed to be used for day to day transactions. It is designed to be four times faster than Bitcoin at processing Scrypt block chain calculations so it can perform at a much speed and the fees are significantly lower.

5 FASTER TRANSACTION TIMES

Litecoin performs block confirmations on Scrypt four times faster than Bitcoin performs block confirmations on SHA-256.

6 MORE POSSIBILITIES FOR INNOVATION

Litecoin offers many possibilities for innovation including SegWit, the Lightning Network and Atomic Swaps. Briefly, SegWit allows for much more information to be stored in each block of verified transactions. The Lightning Network allows small transactions to be bundled into a larger transaction and sent to the block all together as one large transaction. This prevents exorbitant blockchain confirmation cost while running blockchain transactions for small, repetitive purchases such as buying gum at a grocery store and allows Litecoin to function in smaller markets. Atomic swaps allow for instantaneous swaps between cryptocurrencies off exchanges making exchanging more efficient and cost effective.

OID Litecoin Properties

Algorithm   Scrypt
Type   PoW
Coin name   Opioid
Coin abbreviation   OID
Address letter   D
RPC port   36362
P2P port   36361
Block reward   500 coins
Block halving   210,000 blocks
Coin supply   214,285,714 coins
Pre-mine amount   4,285,714 coins

Advanced properties
Coinbase maturity   20 blocks
Target spacing   2 minutes
Target timespan   10 minutes
Transaction confirmations   10 blocks

- IN the Future we are adding POS to our coin, the roadmap has changed. Following are the updates and time frames we are going to do over the next several quarters into next year!

Charity

The OID.LIFE Foundation wants to thank all of our users as your support has been incredible while we continue on this journey of intelligent and inspiring innovation to give back a little. Any contributions from the community will be greatly appreciated. Contributions will be sent directly to Founding partner SoberLIfeUSA as well as the other recovery centers who have signed on to use our coin as payment since the conception of the coin. Contributions of OPIOID Coin, Bitcoin, Ethereum, Litecoin, ZCash, Ripple, Cardano, NEO and GAS are all accepted with addresses below. From everyone at the OID.LIFE Foundation, Thank you!

Worldwide Treatment

SoberLifeUSA offers a complete medical solution to opiate addiction. Advance Medical Detox and Naltrexone Pellet Implant.

SoberLife USA treats addiction as a serious chronic medical disease. Our first step in combating this disease is to conduct a thorough medical examination to make sure this solution is an appropriate fit for you. After the diagnostic consultation, our doctors will design an individual treatment and personal recovery plan that will best suit your needs. For patients that need to be detoxed from Opiates, we have them talk to our Psychiatrist and Addiction Doctor to determine if our Advanced Medical Detox is right for them. After undergoing the 8-hour procedure our patients are free from physical addiction and have no withdrawal. For those already detoxed, we offer Naltrexone Implants. Our doctors perform an outpatient, minimally invasive procedure, using a compounded implant of the FDA approved drug Naltrexone. Within hours of the procedure, the physical craving for opiates and alcohol are greatly reduced, or completely eliminated. After this we recommend that our clients go into an Intensive Outpatient Program where they can address the behavioral, emotional, and psychological aspects of the addiction- free of the physical craving and relapses that conventional treatments could not help. Take the first step toward your new Sober Life with SoberLifeUSA! **We accept most PPO insurance for this procedure. Treatment Available Worldwide!**

Naltrexone Implant

Naltrexone is an FDA approved drug that has been used by patients suffering from addiction for over 30 years. Numerous studies have confirmed its efficacy in reducing the frequency and severity of relapsing opiate and alcohol use. It works by simply blocking the endorphin receptors in the brain to help mitigate the cravings. Traditionally this treatment is taken orally, but patients find it difficult to adhere to the ongoing daily schedule of intake, resulting in minimal success. As a result, fluctuations of the cravings continue to swing (often times with even more severity) making recovery nearly impossible. The compounded Naltrexone implant was designed to curb that problem. The biodegradable implant is safely inserted just beneath the skin, most commonly in the lower abdominal area, by a board certified trained surgeon. Once implanted, the Naltrexone is slowly released into the body over several months. This simple procedure takes 15 – 20 minutes to

complete, and patients often report a decrease in cravings within the first couple of hours. The road to recovery does not end here. Patients will still need to seek therapy or a 12-step program to assist with the ongoing process of addiction recovery. If needed, SoberLifeUSA can help with selecting the appropriate counseling or recovery program that's right for you.

Advanced Medical Detox

Our unique Advanced Medical Detox procedure is truly amazing. Clients are amazed and potential clients ask all the time if this procedure really works. The answer is YES. For detox from heroin or prescription opiates this absolutely works. The patient is put to sleep under anesthesia for up to 8 hours When they wake up, they are fully detoxed. There are no more opiates in their system and they are completely free from all withdrawal. It's an amazing procedure and we've had nothing but great success. Why go through a week of pain and sickness when you can be detoxed in up to 8 hours while you sleep. APPLY NOW if you have any questions, want to book your detox, or to check if its covered by your PPO insurance.

OID.Life connects people who want to be Treated and the Treatment Centers.   Oid.Life helps by coordinating application process, with transportation, and if insurance or charity is needed, to doctors and treatment facilities along with follow up care. What an Amazing system designed to help people regain control of their lives!

THE FOUNDERS

Chad Atkins

Founder CryptoFarm7 Mining Corporation
Calculated Entrepreneurship with Experience

Atkins started out in the business world at a very young age and was in fact only 17 years old when he started his first company. He's come a long way since then and has achieved a lot within his lifetime.

He started out incredibly poor and has become a professional bootstrapper out of necessity. His ability to restructure and turnaround failing businesses is uncanny and lends to his knowledge in business, marketing, law, real estate, accounting, finance, operations, management and leadership. As a serial Entrepreneur, Atkins has developed and built many successful companies that have added tens of millions into the economy and created hundreds of jobs over the years. His number one focus has always been the Customer and his Employees. He enjoys the thrill of new startup ventures and is always looking for the next challenge. He has served in many leadership positions including; International Rotary Club, Local, State and National DECA, Junior Achievement, Served on the board for National Consortium for Entrepreneurship Education and the Fox C6 Education Foundation, along with numerous other organizations. He has been a member and involved with several Chambers of Commerce including Arnold, Lake Ozark, Crystal City, Osage Beach and Festus, Missouri. Atkins has also been a member of FBLA-PBL professional division and have served as a judge at the FBLA District Leadership Conferences.

Education

B.A. Marketing   5/2003

Lindenwood University St. Louis, MO

Dan Francis

Founder CryptoFarm7Mining Corporation
The Cryptocurrency Cowboy

Dan is an experienced expert in all aspects of the Cryptocurrency industry. He's a Lifelong Entrepreneur, in Business Development, Consulting, Branding, Manufacturing, Warehousing, US Postal Mail Sorting-Distribution, Internet Merchandising, Philanthropist, Motivational Speaker & Cryptocurrency Block Chain Investor/Owner and Cryptocurrency Miner. He has experience in mining, blockchain, Bitcoin/Cryptocurrency and how to determine the next hot opportunity. He currently manages a multi-million-dollar cryptocurrency farm.

Clinton Calhoun

CTO CryptoFarm7 Mining Corporation
Decentralized Block Master aka "Cj"

CJ complements our team with over a decade of programming experience for Fortune 500 companies. He leads our development team and brings class with his many years of experience in developing our applications and infrastructure. With vast experience in BlockChain technologies, he has developed many technical achievements; Building mining pools, masternodes, large-scale mining farms, data centers, blockchains, cryptocurrency coins, crypto exchanges, and much more! CJ enjoys the community aspect of cryptocurrencies, he enjoys giving support and advice to any of those who ask him for it, CJ is very active on Discord, Bitcointalk, github and many other community driven apps. CJ will play a key role in developing future projects and applications for the Oid.Life Foundation as he has dedicated his FULL-TIME support and joined CryptoFarm7 as Chief Technology Officer.

Greg Kilper

CryptoFarm7Mining Corporation
The Mathematical Engineer

Greg Kilper has a passion for learning. He believes life is about learning new things and using these ideas to make the world better for everyone. His background includes Bachelor's Degrees in Physics, Electrical Engineering and Biochemistry as well as a minor in Mathematics. Greg has started several small businesses which he runs to this day. His pass times include hiking, enjoying coffee, cryptocurrency mining and studying supersymmetry.

THE ADVISORY BOARD

Csilla Brimer   Linked in

CryptoFarm7 Mining Corporation
Geeky Entrepreneur

In the past 7 years she mastered the art of positive, open & "warm" networking within the International Business, Higher Education & Fintech space across UK, Europe, Asia, Canada, US and South America.

As someone Super passionate about the crypto space, Csilla runs the local Blockchain & Crypto Entrepreneurs meetup in Colorado Springs and involved with the Crypto Café on N Circle Drive.

When she isn't on a mission to build companies, she likes to build and fly drones, travel with her awesome toddler and enjoy the wild-wild west era of crypto investments.

Dr. Yee

Pioneer and Founder of Sober Life USA's

Dr. Yee is the pioneer and founder of Sober Life USA's Advanced Medical Detox program. He is a triple Board-Certified Anesthesiologist, Board Certified Pain Management Doctor, and Board-Certified Addiction Doctor. He has performed his 8-hour detox while under anesthesia procedure on over 580 patients with great success and no negative outcomes or issues.

Dr. Baumgartner

Medical Director and is a Board Certified Thoracic Surgeon

Dr. Baumgartner is our Medical Director and is a Boarder Certified Thoracic Surgeon. He has performed the Naltrexone Implant procedure on hundreds of patients.

Brian VerBurg

Director of Marketing for Sober Life USA

Brian VerBurg is the Director of Marketing for Sober Life USA. Sober Life USA was founded in 2014 and has helped over a thousand patients fight their addiction to opiates.

Conclusion

OID Coin Embraces Proof of Work (PoW) systems in its Blockchain Technology and these coins can be mined on oidpool.com or purchased on cryptocurrency exchanges. This Coin "piggybacks" on the Litecoin platform and it has the power to make some huge, positive changes in the world namely by fighting the scourge of Opioid Addiction facing our country at this time. We are anticipating being traded on multiple exchanges soon!

Thank you for your time and please feel free to reach out at any time with questions or concerns to the team at www.oid.life*.*
